MEMORANDUM FOR THE RECORD

SUBJECT: Adapter Booster - P-Unit

In early 1956 the adapter booster was tested at [] for its ability to initiate the incendiary head for the A. C. Delay. Approximately six P-units were fired by adapter boosters using a twenty-four hour clockwork time delay. In none of these six cases did the explosive force of the adapter booster project the head more than one foot.

25X1

On the basis of these tests and the modifications to the adapter booster to improve the seal, the adapter booster will replace the special adapter in all future firing systems.
